

## Introducing F-Gas Module

We are proud to be introducing a new F-Gas tracking and reporting module developed in conjunction with Refcom. Manage your F-Gas compliance with minimal admin!

### Gas Cylinder Management

- » Stock control of all gas bottles
- » Digital management of cylinder locations
- » Helping to minimise rental charges on bottles

### Logbook

- » Automatically updated F-Gas logbook
- » Every asset easy to reach for inspection
- » Data synchronisation of every service visit & leak check

### F-Gas Tracking

- » Asset tracking – identify recurring problems
- » Generate compliance certificates and data for clients
- » Create waste transfer notes where applicable

## Exclusive offer for Refcom members

With the introduction of our partnership with Refcom we will be offering all Refcom members a special offer:

**One free user license for life.**

No strings attached! Simply visit [www.joblogic.com](http://www.joblogic.com), sign up for a free 30-day trial and see if the tool is the right match to your business.

## Arrival of Refcom Feature to Joblogic Mobile

We are proud to announce the arrival of our Refcom module to Joblogic Mobile. With full functionality of Refcom features, engineers can now update details for gas cylinders and view waste transfer notes straight from their mobile device.

**Constant Access** - While out doing a job, engineers can access the Refcom logbook which shows any additions, removals, leak checks and corrections made by other workers.

**Portability** - Engineers can carry information while on-the-go and make any changes, with just the use of their mobile device.

**Ensuring Compliance** - Engineers can ensure that the correct gases and weights are used for Refcom cylinders at customer sites and ones in the company storeroom.

**Connected to Back Office** - When the engineer can access an internet signal, any changes they make in the Refcom app will synchronise to the back office.
