

## MVC Software Engineer / Developer (Vietnam Office)

### Job Summary

Market leading Field Service Management software provider seeking 2 software developers with an engineering mindset and a passion for building scalable and innovative software applications. The company has a great working environment with excellent opportunities to progress your career in a flexible but demanding and accountable culture.

Whatever your background, whether you started your career with formal higher education, graduated from an apprentice programme, or are a self-taught coder, you will need to show evidence of having created and delivered a range of software solutions, with concepts or problems which your work successfully proved or resolved.

The technology stack you'll be working with is .NET MVC, SQL Server, Azure IaaS & PaaS, CSS & HTML, Angular, Bootstrap, JavaScript, jQuery, TDD and Jira.

- Assessing and understanding user stories and coding tasks
- Designing, developing and coding new features, applications, upgrades and bug fixes to high-quality standards and customer expectations
- Support of existing applications
- Estimating Agile user stories and tasks and proposing technical solutions
- Progressing tasks and coding deliverables to completion
- Designing and coding high-quality, readable and maintainable Unit Tests to ensure maintainability, confidence and testability of changes
- Taking part in code reviews and collaborate with other developers
- Proactively grow your professional capabilities and those of the team

### Qualifications and Skills Requirements:

- 3+ years working as a software developer building enterprise-level .NET applications
- Proficient .NET 4.x, ASP.NET MVC, Web API, SQL, WCF Services
- Web technologies including CSS, HTML, Javascript and Ajax
- Good experience of Unit Testing and Integration Testing; an understanding of TDD, mock testing, ability to write and run unit tests
- Good knowledge of OOP, using IoC container, and some design patterns
- Knowledge and experience of TDD, DDD, SOA and Solid principles is a must
- Solve complex n-tier application issues using state-of-the-art Microsoft .NET technology
- Experience with front-end technologies and libraries, such as bootstrap and jquery
- Relevant degree or equivalent experience and qualifications
- Able to communicate clearly with team members and colleagues
- Able to accurately estimate stories and tasks to inform sprint and epic planning

- Capable problem solver and solution designer
- Knowledge of web application security and best practices
- Must have working experience of functioning in a scrum team
- NET development experience in a commercial environment
- Microsoft Azure experience is plus

**Useful Skills:**

- Good communication skills and teamwork capabilities
- Ability to communicate ideas clearly and professionally
- Experience with and/or interest in full software development lifecycle activities
- Requirements management, technical design, implementation, testing/release
- Desire and willingness to understand and embrace new technologies and methodologies
